The Plot One: WhatsApp Cloud API setup and templates

Nov 4, 2026 · @Kamarudeen B

The Plot One will send WhatsApp messages from its own number once the setup below is done and Meta approves the 13 message templates. The dev team builds and submits exactly what is listed here.

Setup steps

The Afra Ventures business account is already verified, so the slowest step is done. Work through these in order.

1. Get a phone number that is **not registered on any WhatsApp app**. Keep it only for The Plot One. A number can be on the Cloud API or the app, not both.
2. In the verified Afra Ventures Meta Business account, create a Meta developer app and add the **WhatsApp** product.
3. Register the number in the app and verify it with the code Meta sends.
4. Submit the display name **The Plot One**. If Meta refuses it, resubmit as **The Plot One by Afra Ventures**.
5. Add a payment method to the WhatsApp account. Without it, sending stops.
6. Submit the 13 templates below in one batch.
7. Create a **permanent access token** (system user) and a webhook. Put them in the server settings only, never in code, chat or git.
8. Check whether the existing Afra API already runs a Cloud API number on this account. If it does, add a second number under it instead of starting a new app.

The code switches from the temporary Afra API route to this account through a settings change.

Templates

Language is English. Names are lowercase with underscores. Variables are `{{1}}`, `{{2}}` and so on, and the sample values go into the Meta form in the same order, separated here by slashes. Button URLs are placeholders until the final page addresses are confirmed.

#	Name	Batch	Category	Message text	Sample values	Button
1	otp_login	1	Authentication	{{1}} is your verification code. For your security, do not share this code.	482913	Copy code
2	owner_daily_digest	1	Utility	Good morning {{1}}. Your daily summary for {{2}}: {{3}} leads unassigned, {{4}} decisions waiting for you, system status {{5}}. Open the Command Centre to review.	Kamar / 4 Nov / 3 / 3 / healthy	Open: https://theplotone.com/open/{{1}} (sample: command-centre)
3	promoter_new_lead	1	Utility	Hi {{1}}, you have a new buyer lead for {{2}}. Please call within {{3}} for the best response.	Suresh / Sunrise Layout / 30 minutes	Open: https://theplotone.com/open/{{1}} (sample: leads)
4	promoter_payment_received	1	Utility	Hi {{1}}, we received your payment of Rs {{2}} for the {{3}} plan. Your campaign for {{4}} is now active. Thank you.	Suresh / 24,999 / Growth / Sunrise Layout	none
5	buyer_requirement_received	1	Utility	Hi {{1}}, we received your property requirement for {{2}}. We will share matching properties shortly.	Mohan / Villianur	none
5b	buyer_requirement_received_ta (Tamil, ta)	1	Utility	வணக்கம் {{1}}, {{2}} பகுதிக்கான உங்கள் சொத்துத் தேவை எங்களுக்குக் கிடைத்தது. பொருத்தமான சொத்துகளை விரைவில் பகிர்வோம்.	Mohan / Villianur	none
6	buyer_matches_ready	1	Utility	Hi {{1}}, we found {{2}} properties that match your requirement in {{3}}. Tap below to view them.	Mohan / 4 / Villianur	View matches: https://theplotone.com/open/{{1}} (sample: matches)
6b	buyer_matches_ready_ta (Tamil, ta)	1	Utility	வணக்கம் {{1}}, {{3}} பகுதியில் உங்கள் தேவைக்குப் பொருந்தும் {{2}} சொத்துகள் கிடைத்துள்ளன. பார்க்க கீழே தட்டவும்.	Mohan / 4 / Villianur	[illegible]: https://theplotone.com/open/{{1}} (sample: matches)
7	agent_lead_offer	2	Utility	Hi {{1}}, a new buyer enquiry in {{2}} matches your plan. Budget: {{3}}. You have {{4}} to accept before it moves to the next agent.	Ravi / Villianur / Rs 18-22 lakh / 15 minutes	View offer: https://theplotone.com/open/{{1}} (sample: offers)

#	Name	Batch	Category	Message text	Sample values	Button
8	agent_offer_expired	2	Utility	Hi {{1}}, the offer for a buyer enquiry in {{2}} has expired and was passed on. Your plan stays active, and new offers will arrive here.	Ravi / Villianur	none
9	agent_plan_renewal	2	Utility	Hi {{1}}, your {{2}} plan ends on {{3}}. Renew before then to keep receiving buyer enquiries without a break.	Ravi / Growth / 20 Nov	Renew plan: https://theplotone.com/open/{{1}} (sample: plans)
10	promoter_weekly_report	2	Utility	Hi {{1}}, your weekly report for {{2}}: {{3}} leads delivered this week, {{4}} delivered in total against your committed {{5}}. Open the dashboard for details.	Suresh / Sunrise Layout / 12 / 34 / 50	Open dashboard: https://theplotone.com/open/{{1}} (sample: dashboard)
11	promoter_plan_expiring	2	Utility	Hi {{1}}, your {{2}} plan for {{3}} ends on {{4}}. Renew to keep your campaign running.	Suresh / Growth / Sunrise Layout / 20 Nov	Renew now: https://theplotone.com/open/{{1}} (sample: plans)
12	staff_callback_reminder	2	Utility	Hi {{1}}, reminder: you have a callback due at {{2}} for a buyer interested in {{3}}.	Divya / 3:30 PM / plots in Ariyur	Open queue: https://theplotone.com/open/{{1}} (sample: queue)
13	admin_system_alert	2	Utility	Alert for {{1}}: {{2}}. Please check the Automation Monitor.	The Plot One / lead routing job has not run for 30 minutes	Open monitor: https://theplotone.com/open/{{1}} (sample: monitor)

Template 1 uses Meta's fixed authentication format, so its text cannot be changed.

Batch 1 is submitted now. **Batch 2** is submitted only when its feature works on staging (agent offers, agent and promoter renewal jobs, weekly report, telecaller callbacks, watchdog alerts).

One stable button link. Every button uses `https://theplotone.com/open/{{1}}` with the sample value shown, so approved templates never depend on page addresses that may change. The dev team builds the `/open/:target` route:

- It accepts only a fixed list of targets: leads, dashboard, plans, offers, matches, queue, monitor, command-centre. Anything else goes to the home page.
- It sends each target to the current real page for the user's role. If the person is not logged in, it goes to login first, then on to the page.
- It never redirects to an address taken from the message or the link.

- A person opening a target their role cannot use sees the unauthorized page, never another person's data.
- Test it on staging by opening each target logged in as a promoter, an agent, a buyer and an admin.

Message rules

The code must enforce these, and tests must prove it.

- Never send a promoter's ad spend, cost per lead, targeting or margin in any message.
- Never include a campaign ID or source campaign in any message to an agent.
- Never include a seller's phone number in any message to a buyer.
- Agents are push-first. WhatsApp to an agent is a fallback, not the main channel.
- A message with no approved template can only be sent as free text within 24 hours after the person last wrote to us.
- Variables must not contain line breaks or more than four spaces in a row.
- Marketing-style messages need the person's opt-in. All 13 templates above are transactional (utility or authentication), so they do not.
- Never log phone numbers in full or the access token.

What the dev team collects and configures

All values go in the server settings (environment variables). None go in code, git or chat.

- Phone number ID of the registered number
- WhatsApp Business Account ID
- Permanent access token
- App secret (to verify webhook signatures)
- Webhook verify token (a random string we choose)
- Template names exactly as in the table above
- A switch for the sending route: temporary Afra API or own Meta Cloud API

The webhook must verify Meta's signature, record delivery and failure status for each message, and retry a failed send a limited number of times before flagging it for the Automation Monitor. A daily spending cap and an off switch must exist.

Test checklist before go-live

- [ ] Number registered and display name approved

- [ ] All 13 templates approved (note any rejected, fix wording, resubmit)
- [ ] Send each template to a test phone with the sample values and check the variables, buttons and links
- [ ] Delivery status arrives through the webhook and is stored
- [ ] A wrong token or a blocked number fails safely and raises an alert
- [ ] The 7 AM digest reaches the owner's phone
- [ ] Messages to agents contain no campaign ID, and messages to promoters contain no ad spend or cost per lead
- [ ] The off switch stops all sending
- [ ] The switch back to the temporary Afra API route works
